## Additional information

Zaza Javashvili is a researcher at Engineering Institute of Membrane Technologies, Technical University of Georgia, Doctor of Chemical and Biological Technologies, co-author of about 20 scientific articles and participant of international conferences. My research topics include studies of membranes and membrane nanotechnologies, surface structure of polymeric materials. I am directly involved in the research of issues related to the creation and implementation of membrane devices (membranes, research and production tools), baromembrane processes. I conduct research on baromembrane water purification processes.
